SUMMARY

Full Stack developer with 3+ years in production, now focused on applied AI: LLM features with tool use, evals, and defending against prompt injection. Built multi-tenant Node.js and TypeScript services (Redis, BullMQ, AWS SQS) and accessible public-sector front ends. Two public repositories measure LLM behavior against real data instead of demos.

EXPERIENCE

Software Engineer II · Clube Certo April 2025 - October 2026

- Built and maintained Node.js and TypeScript services for multi-tenant white-label products, with Redis caching and asynchronous integrations on BullMQ and AWS SQS.
- Eliminated critical N+1 queries across MySQL/Sequelize endpoints, cutting response times on core API routes.
- Managed AWS infrastructure (EC2, S3, CloudFront, Amplify) and took part in monitoring and incident response for production workloads.

Node.js, TypeScript, MySQL, Sequelize, Redis, BullMQ, AWS SQS, EC2, S3, CloudFront, Amplify

Software Developer · PRODEMGE February 2023 - February 2025

- Built interfaces for the IPSEMG Portal, the social security platform for Minas Gerais state employees, following WCAG accessibility standards and public-sector data rules.
- Delivered responsive interfaces across React, Angular and Vue codebases in Agile/Scrum teams, with code review, Git Flow and GitLab CI/CD.

React, Angular, Vue.js, TypeScript, Bootstrap, GitLab CI/CD

PROJECTS

triage-agent · github.com/Brolly26/triage-agent 2026

- Classifies GitHub issues and escalates to a human when it should not decide alone. CLI plus a GitHub Action that only adds labels.
- Measured, not assumed: scored against maintainers' labels (stripped before classifying) on 49 real issues. The rules rarely answered but were right when they did; Claude answered almost everything and was wrong on about one in eight of what it answered alone.
- On 81 more issues, the model's stated confidence tracked its accuracy and the escalation threshold never fired. Documented as a policy choice, not tuned away. Injection payloads cannot produce a drafted reply, even with the model fully fooled.

TypeScript, Claude API (structured outputs), evals, calibration, GitHub Actions

SiteCheck AI · github.com/Brolly26/IACheckSite 2026

- Crawls a site with Puppeteer and returns an LLM audit as a PDF. The audited site is attacker-controlled text; I hardened the prompt path structurally and wrote negative evals that prove it.
- A rule-based path keeps the product working when the model is down. The test suite is mutation-tested and gated in CI.

TypeScript, OpenAI API, Puppeteer, evals, CI gates

Luna · private repository, walkthrough on request 2026

- Solo build of a multi-tenant WhatsApp assistant for dental and aesthetic clinics. Agents on the Claude API use tool use to book appointments, answer FAQs and hand the conversation to a human.
- Per-tenant data isolation, BullMQ + Redis pipeline with retries, Next.js dashboard. Not commercially launched.

Claude API, Node.js, TypeScript, Next.js, BullMQ, Redis, Supabase, WhatsApp Cloud API, AWS

SKILLS

Applied AI: Claude and OpenAI APIs, tool use, structured outputs, evals and regression tests, prompt-injection hardening, confidence calibration

Backend: Node.js, TypeScript, Python, REST APIs, MySQL, Sequelize, Supabase, Redis, BullMQ, AWS SQS

Frontend: Next.js, React, Vue.js, Angular, Tailwind CSS, Bootstrap, WCAG accessibility

Cloud & tools: AWS (EC2, S3, CloudFront, Amplify), GitHub Actions, GitLab CI/CD, Git

Languages: Portuguese (native), English B2 (exchange program in Halifax, Canada, 2022)

EDUCATION

Postgraduate Specialization, Software Engineering · Faculdade Unypública — Aug 2026 - present
System Analysis and Development (technology degree) · Universidade Estácio de Sá — Oct 2022 - Jun 2025
Technical Course in Systems · SENAI — Feb 2021 - Aug 2022
English Immersion, B2 · ECLC, Halifax, Canada — 2022
